

5 **Claims**

1. A package for sheets, for example sheet formed
information carriers such as CD-sheets, DVD, CDR, CD-RW and
so on and comprising an outer envelope (3) and an inner
10 envelope (4) formed separately or in one and a same piece
together with said outer envelope, manufactured by carton,
paper, plastic, wellpapp or the like, which have been double
folded to constitute a cover protecting the sheets or the
actual sheet (2) at the same time as said inner envelope (4)
15 supports and partly encloses said sheet (2), so that from the
inside (13;14) of the outer envelope (3) close to its back
portion (5) said inner envelope (4) extends in a direction
forwards and comprises at least one open space (6) delimited
laterally by a double fold (7) on each side, which has a
20 length forwards extending past the half diameter of the
stored sheet (2), **characterized in** that during the closed
position and up to its mainly half open position of the
package (1) or immediately before the half opened position
said space (6) has an opening width which, after the
25 extension forwards of the double fold past the half diameter
of the stored sheet (2), is less than the diameter of the
sheet (2) by that the double folds (7) converge in a
direction towards each other in order to prevent a sliding
out of said sheet (2) from the space (6), and during the
30 continued opening of the package (1) and up to its totally
opened position said space (6) has an opening width, which is
greater than the diameter of the sheet and makes it easy to
take out from the space.

35 2. A package according to claim 1, **characterized in** that
during the continued opening of the package and up to its
totally opened position the space (6) having the sheet (2) in
the same is automatically lifted upwards in order to expose
the sheet (2) at the same time as the sheet is easy to grip.

40 3. A package according to claim 1, **characterized in** that
each double fold (7) is constituted by two portions (8,9)
folded towards each other along at least one outer crasing

5 line (C), which are via upper and lower crasing lines (A,B)
foldable formed in said inner envelope (4), said upper
crasing lines (A) each extend into their portion (10), which
in turn is foldable as symmetrically connected via crasing
lines (D) with a portion (11), delimited forwards by the last
10 mentioned crasing lines (D) and backwards by a crasing line
(E) extending laterally the width of the outer- and inner
envelope (3,4), which extends into a portion (12), which
foldable extends into any of the insides (13;14) of the outer
envelope (3), i.e. the inside of the front- or backside, a
15 short distance from its back portion (5) via a flap (17),
which is fixed against the first inside (13) and which
extends into a direction towards the back portion (5) or in
an opposite direction towards the first inside (13) at the
same time as the lower crasing lines (B) of the double fold
20 (7) extend into a portion (15), which via crasing lines (G)
foldably extend into portions (16), which are fixed against
the other inside (14) of the outer envelope (3).
